

Attachment 5(C)—Maranoa River Water Supply Scheme zones

Table 1—Description of zones for the Maranoa River Water Supply Scheme

Zone	Location	AMTD (km)
MRS-01	Maranoa River – from the upstream extent of the ponded area of Neil Turner Weir downstream to Neil Turner Weir	229.2 – 222.2 km

Map 1—Maranoa River Water Supply Scheme zones

Attachment 5(D)—Not used

Attachment 6—Outcomes of the *Water Resource (Condamine and Balonne) Plan 2004*

<i>Water Resource (Condamine and Balonne) Plan 2004</i> outcomes (section 9)*	Rules and requirements of the <i>Condamine and Balonne Resource Operations Plan 2008</i> that address the <i>Water Resource (Condamine and Balonne) Plan 2004</i> outcomes
Water is to be allocated and managed in a way that seeks to achieve a balance in the following outcomes—	
(a) to make water available to support economic activity in the plan area while recognising the social and cultural values of communities in the basin	<ul style="list-style-type: none"> • granting and converting authorisations to water allocations • granting water entitlements for existing operations • process for granting licences for taking overland flow water • change rules and seasonal water assignment rules for trading water allocations • operating, environmental management and water sharing rules • provision to apply water level drawdown limits for taking water from waterholes • monitoring, assessment and reporting requirements
(b) to build social cohesiveness in the community by recognising the multiple users of water, including both indigenous and non-indigenous social and cultural needs	
(c) to promote improved understanding of social and cultural resources	
(d) to minimise any adverse effect on individual enterprises	<ul style="list-style-type: none"> • granting and converting authorisations to water allocations • granting water entitlements for existing operations • change rules and seasonal water assignment rules for trading water allocations • operating, environmental management and water sharing rules • specifying flow conditions on water entitlements where needed to provide for other users • consideration of third party interests in making decisions under this plan
(e) to provide increased security in water entitlements for water users, including protecting the probability of being able to obtain water under an authorisation	<ul style="list-style-type: none"> • granting and converting authorisations to water allocations • granting water entitlements for existing operations • process for granting licences for taking overland flow water • change rules and seasonal water assignment rules for trading water allocations • operating, environmental management and water sharing rules, including critical water supply arrangements • monitoring, assessment and reporting requirements • identifying amendments that may be made to this plan • providing a process for dealing with water licence applications

Water Resource (Condamine and Balonne) Plan 2004 outcomes (section 9)*	Rules and requirements of the Condamine and Balonne Resource Operations Plan 2008 that address the Water Resource (Condamine and Balonne) Plan 2004 outcomes
(f) to support an effective and efficient market in water allocations while ensuring safeguards are in place to protect the environment and the entitlements of water users	<ul style="list-style-type: none"> • granting and converting authorisations to water allocations • change rules and seasonal water assignment rules for trading water allocations within sustainable limits
(g) to make water from the basin available to be stored and used while retaining water for the riverine and associated environment	<ul style="list-style-type: none"> • water sharing rules that include consideration of providing flows for downstream values • process for granting licences for taking overland flow water, including using existing works for storing overland flow water • applying limits on storing water taken under water allocations • providing rules to allow a condition that prevents water being stored to be removed from a water allocation within rules that ensure there is no increase in the average annual volume of water taken
(h) to achieve ecological outcomes consistent with maintaining a healthy riverine environment, floodplains and wetlands, including, for example, maintaining—	<ul style="list-style-type: none"> • specifying water entitlements with volumetric limits • regulating the taking of overland flow water • operating and environmental management rules, including rules for the rate for releasing water from infrastructure to minimise the likelihood of environmental impacts • water sharing rules, including rules for managing unsupplemented and supplemented water allocations that set minimum passing flow requirements • provision to apply water level drawdown limits for taking water from waterholes • monitoring, assessment and reporting requirements, including chief executive requirements for monitoring ecological assets and resource operations licence holder monitoring of the affect of infrastructure operations on aquatic ecosystems
(i) pool habitats, and native plants and animals associated with the habitats, in watercourses	
(ii) natural riverine habitats that sustain native plants and animals	
(iii) the natural abundance and species richness of native plants and animals associated with habitats within watercourses, riparian zones, floodplains and wetlands	
(iv) active river-forming processes, including sediment transport	
(v) existing flow paths across the floodplains to allow ecological processes to take place	
(vi) the condition and diversity of native vegetation on the floodplains and related streams	
(vii) the diversity and abundance of native animals within the floodplains and related streams	

Water Resource (Condamine and Balonne) Plan 2004 outcomes (section 9)*	Rules and requirements of the Condamine and Balonne Resource Operations Plan 2008 that address the Water Resource (Condamine and Balonne) Plan 2004 outcomes
(i) to contribute to maintaining or improving the ecological condition of the Darling River upstream of Bourke	
(l) to reduce the impact of the operation of water infrastructure on natural flow regimes	
(m) to maintain water quality at levels acceptable for water use and to support natural ecological processes	
(n) to promote a continual improvement in water use efficiency, both in the plan area generally and on individual properties	<ul style="list-style-type: none"> • granting and converting authorisations to water allocations • granting water entitlements for existing operations • process for granting licences for taking overland flow water • change rules and seasonal water assignment rules for trading water allocations • monitoring, assessment and reporting requirements
(o) to promote improved understanding of the matters affecting the health of riverine and associated systems in the basin	<ul style="list-style-type: none"> • explanatory notes that provide details of the intent and application of the plan provisions • monitoring, assessment and reporting requirements

*The outcomes stated in subsections 9(j), (k), (p) and (q) of the *Water Resource (Condamine and Balonne) Plan 2004* are beyond the scope of this plan.
